

2014 CASE STUDY

Dorman's **WINSHUTTLE**™ Case Study

Dorman Products, Inc. is an after-market auto parts wholesaler, with hundreds of thousands of unique SKU's. Dorman discovered the Winshuttle Studio tools and requested them as an alternative to LSMW's for their data migration activities prior to their initial Phase 1 SAP go-live.

Their existing implementation partner did not have experience on the Winshuttle tools, so they reached out to G3G for assistance in writing data migration scripts. After displaying our expertise and showing what else was capable with Winshuttle, G3G was asked to stay on for a prolonged engagement to create templates and scripts beyond just data migration.

The business users realized the value and speed of WinShuttle. Dorman requested us to build Winshuttle processes for their end-to-end product lifecycle. This includes material master creation & updates, classifications, source lists, BOM's, routings, purchasing info records, pricing, material determination, material exclusion, customer material info records, & packing instructions. We also built processes for customer & vendor

master creation, rebate agreements, output condition record uploads, FI clearing documents and journal entries, WM processes, production versions, and many others.

All of G3G's efforts have been focused on the rapid processing of mass amounts of data into SAP. Creating 200 parts at a time manually is not a viable option for Dorman. Through the use of the Winshuttle Studio tools (Transaction, Runner, Direct) we've been able to build templates that can move entire product lines through their lifecycle without the users ever having to log into SAP. Because of this ability, the learning curve and training cycle on SAP for new users has been drastically shortened. Product management employees use a familiar Excel interface and the Runner add-in to quickly process parts and load their master data, then move onto their next task.

Simply put, Winshuttle works for Dorman. G3G has been a solid partner in meeting their design challenges and needs, providing on-site & remote support to deliver whatever is required. Phase II go live for Dorman is right around the corner and they continue to leverage G3G and the Winshuttle tools to their fullest extent.

Who is G3G?

We are a global consulting organisation specialising in SAP. We have offices in the UK, the USA and South Africa, and our consulting team operates a “one team, many locations” approach to provide our customers with a global delivery capability across the full suite of SAP applications.

We were founded in 1998 and have grown to become a Gold reseller. We are also PCoE certified meaning that we are accredited to offer SAP support services globally.
