

G3G CLOUD DEPLOYMENT

The G3G HANA Cloud provides the flexibility to trial new technology and leverage our “always on” Cloud to showcase innovations to your business. SAP HANA is the new “norm” for SAP and as part of planning your roadmap, we can aid your decision making process and adoption through a migration proof of concept in the G3G HANA Cloud.

G3G can get you up and running in G3G’s HANA Cloud for less than you think because our Cloud is based on tailored data centre integration (TDI). Moving from the appliance delivery method to TDI introduces a more open and flexible approach to introducing HANA into a data centre.

This translates to reduced hardware and operating costs through the reuse of existing hardware components, operational processes and virtualisation of the HANA systems.

Have you considered the benefits of a Cloud Strategy?

It’s hard to ignore the impact the Cloud is having on modern applications for both consumers and businesses. Technology advances are simplifying the adoption of applications in the Cloud, increasing security and driving costs down for ongoing operations and business continuity solutions.

Running applications requires both technology and people. G3G’s HANA Cloud can provide you with both to a lesser or greater degree depending on your needs and preferred deployment strategy. Is the Cloud right for your business? Should you invest in more of your own infrastructure? Move to the Cloud or take a hybrid approach?

As an existing SAP customer, G3G’s HANA Cloud provides you with choices for adopting Cloud usage and services. These range from business continuity through to a fully managed Cloud offering for your SAP applications including S/4 HANA (SAP Business Suite on HANA).

Why the G3G Cloud?

Predictable Cost Model

Moving to G3G’s HANA Cloud means a single predictable cost for running all your SAP applications. This includes hardware, software and support all wrapped up in a single managed services SLA.

Focus on your Core Business

If your infrastructure is nearing end of life, or running your SAP applications is proving a distraction from your core focus, a full cloud deployment with managed services may be right for you. This allows you to focus on your business while G3G ensures the high availability of your SAP solution underpinned with class-leading service levels and a business continuity solution.

Reduced Barrier to Entry for Adopting New SAP innovations

SAP is innovating at an unprecedented pace. G3G has lowered the cost and time barriers to entry for many of these new innovations through the provision of G3G shared Cloud services. These include gateway integration services for mobility, including SAP Fiori, Business Objects and mobile services. Furthermore, G3G regularly invests ahead of our customers and runs many of the new SAP innovations in our labs as well as in-house to run our own business.

Simplified Adoption of Mobile Applications with "Hybrid" Deployment

It may be that a hybrid model is right for you where your core enterprise solution remains on premise while leveraging business intelligence, mobile or integration services within G3G's HANA Cloud.

This enables you to get up and running more quickly with services such as SAP Fiori, as well as benefit from our tight integration capability with SAP's own hosted Cloud solutions.

This also means we take care of the security where parts of the application are made available to mobile workers outside of your corporate network.

Showcase Innovation

G3G's HANA Cloud also provides the flexibility to test out new technology and leverage our "always on" Cloud to showcase innovations to your business.

SAP HANA is the new "norm" for SAP and as part of your roadmap planning we can aid your decision making process and adoption through a HANA migration proof of concept in the G3G HANA Cloud.

G3G Cloud Business Continuity

If you have investment in infrastructure and in people for supporting your SAP environments but require site redundancy or an easier way of getting backups offsite, G3G can provide a cost effective business continuity solution.

We provide reserved infrastructure and services to get you back up and running from one of our data centres in the UK, Europe or USA in the event of a catastrophic outage in your primary data centre.

Globally Reliable Performance

G3G's HANA Cloud resides within the Level 3 communications network, meaning global coverage and Tier 1 access to internet bandwidth for class leading performance. The G3G HANA Cloud grows and flexes wherever your business may take you, allowing you to bring new offices on board with minimum effort and cost.
