

# S/4HANA FINANCE

**76% of finance executives believe at least half their time should be on high-value planning and analytic activities, though only 55% achieve this. (CFO.com)**

**76% of global companies do not have financial performance data at the ready (Harvard Business Review)**

**70% of analytics effort is preparing data (IDC)**

**“With SAP S/4HANA Finance, our finance organisation will be able to focus on the most essential tasks and get the job done in real time.”**

**John Dewar. President and Vice Chancellor, La Trobe University Chairman.**

**65% faster financial close processes**

**50% faster foreign currency revaluation**

**1000x faster reporting (from 15 minutes to 1 second)**

According to surveys from CFO.com, **76% of CFOs see a growing need to be more involved with operational business units**, and **73% of CFOs say that finance executives say that long term strategic planning is the largest area of new demand**. As well, **58% of the CFOs say that their company’s line-of-business managers have difficulty using finance information systems** to identify and understand the data they need to make effective decisions.

Effectively, ERPs have become complex and not dynamic enough to satisfy the real-time information needs that CFOs currently need. There are still challenges with processes like real-time financial analysis, Financial Consolidation with subsidiaries, real-time treasury and financial risk management, month-end closing, and a response to those is already overdue.

## **SAP S/4HANA Finance, Powered By S/4HANA**

SAP S/4HANA Finance has been built to help meet the evolving business needs of finance departments.

The advanced capabilities and innovations include:

- Providing a single source of truth between transactions and analytics to streamline and eliminate cycle times and reconciliations of the data
- New on-the-fly capabilities for moving finance processing, such as month-end activities, from batch to real time
- Innovative rapid planning and forecasting combined with predictive analysis to explore new business models and immediately assess potential effects on the bottom line
- New reporting and analytics capabilities for finance users with self-service access to all information, allowing instant insight-to-action
- Connections to business networks in real time to establish an integrated business ecosystem and help drive optimal collaboration with customers, suppliers, banks and government authorities
- Global regulatory compliance capabilities across currencies, languages and industries with built-in legal compliance capabilities and continuous risk assessment along all enterprise processes

## Why G3G?

We understand that you need to focus on running your business, not running your finance system.

Our track record of accelerating implementation timescales will enable you to go live within 1 month, giving you a faster return on your investment.

With S/4HANA Finance powered by SAP's S/4HANA you will have real-time metrics to enable you to improve business performance with timely information and faster decision making.

You will be able to accelerate the financial close maintaining compliance.

With SAP's real-time capability you will be able to report alongside processing transactions, rather than experience any delay between processing and reporting.

## Why SAP?

Many of the world's most successful companies run SAP. With SAP you can manage all aspects of your business in a single integrated solution that provides real-time information to everyone in your organisation.

SAP's user interface means that it is easy to use regardless of the device being used, making even the most complex functions and business processes simple.

We provide a comprehensive and cost-effective cloud service specifically based on SAP's unique HANA 'in-memory computing' which brings together both transactional and analytical data in an instant.
